Digital economy challenges

KEY FACTS

61%

Higher new-product revenue when companies communicate product portfolio goals downward through the organization and measure and report results*

Companies today need timely insights and the ability to respond quickly to individual product needs and “smart” sensors. The new information refinery needs to capture information from everywhere and turn it into something that has meaning for the end user. Ideally, this new data refinery would be connected to your business processes, so that you could sense, respond, and act to achieve your business goals.

KEY FACTS

8%

Improved project delivery – more projects completed by the top 25% of organizations versus the average*

Strategic and Capital Investments

Identify which projects can generate the most business value

Commercial Projects

Increase profitability and transparency by streamlining lifecycle of commercial projects

Project Management

Plan, implement, and control project processes across your enterprise.

Resource Management

Invest the right resources in the right projects and complete quality work

Manage digital transformation

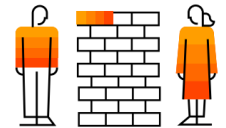

Maximize your performance through business organization

Live Analytics

Access your business data and get real time insight in your planning and actual data; Predict and forecast your business

KEY FACTS

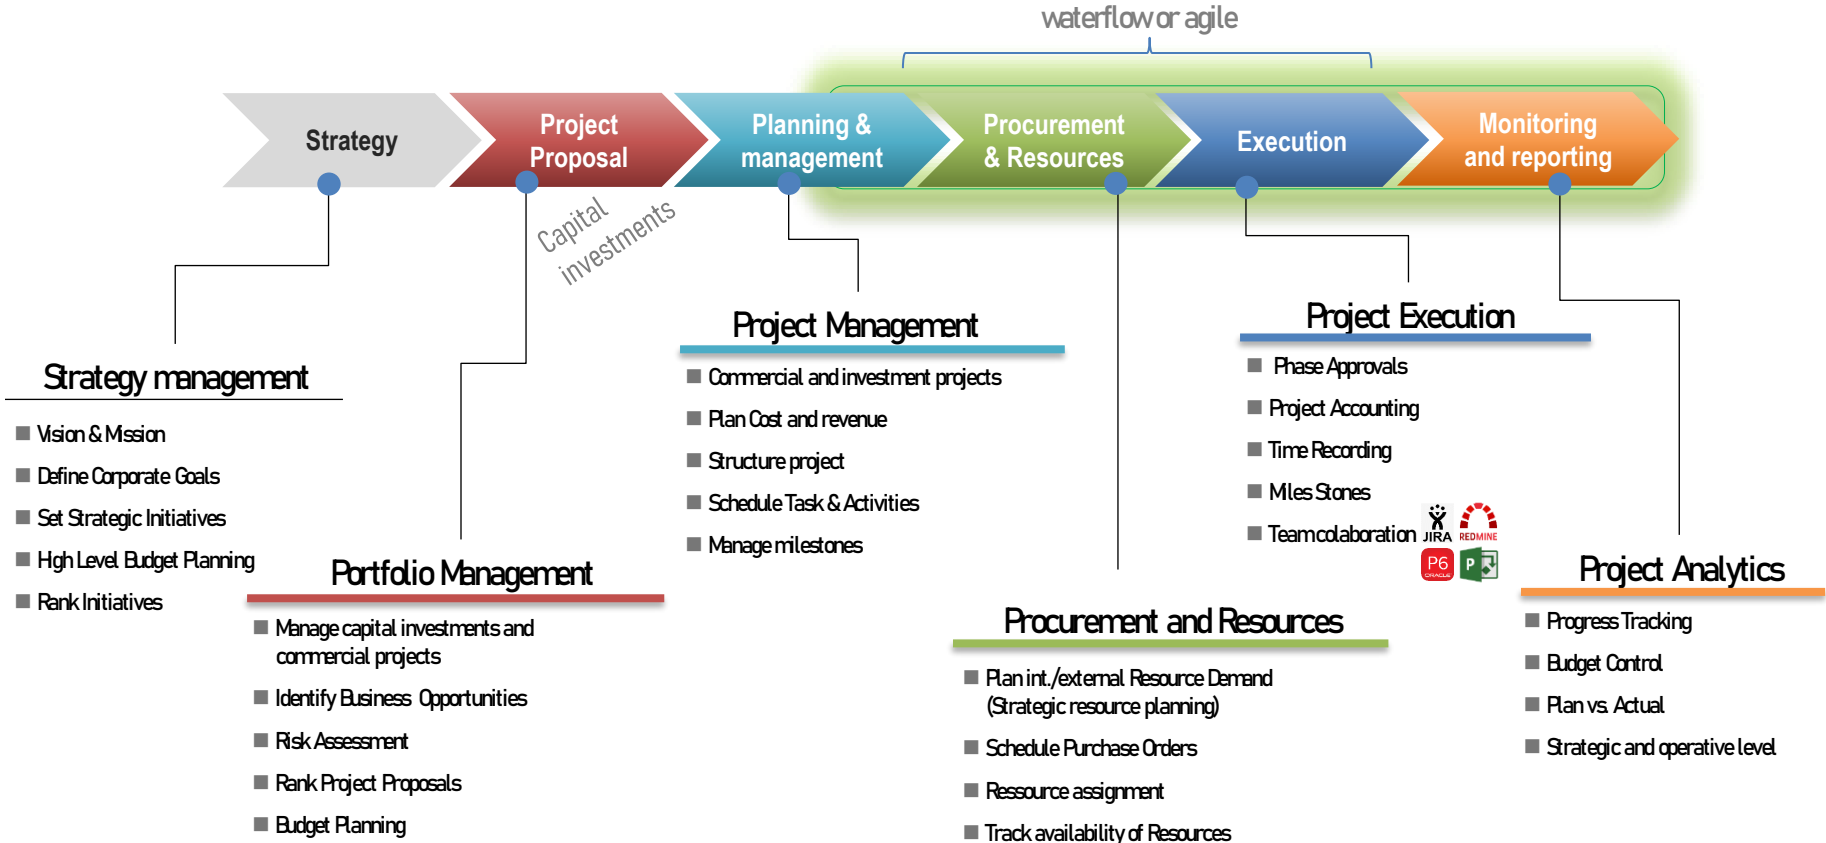

80%

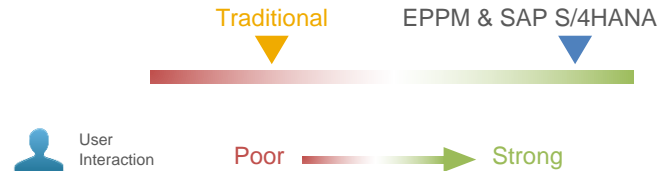

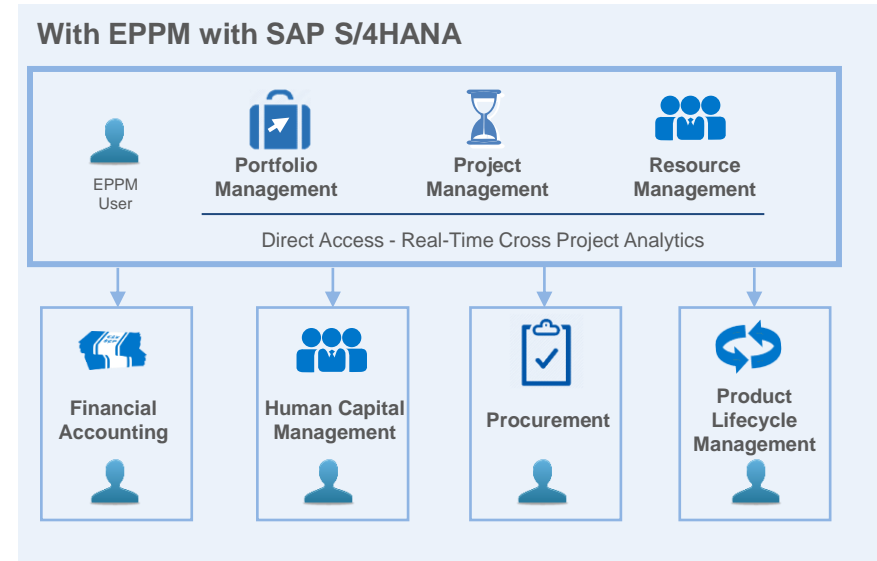

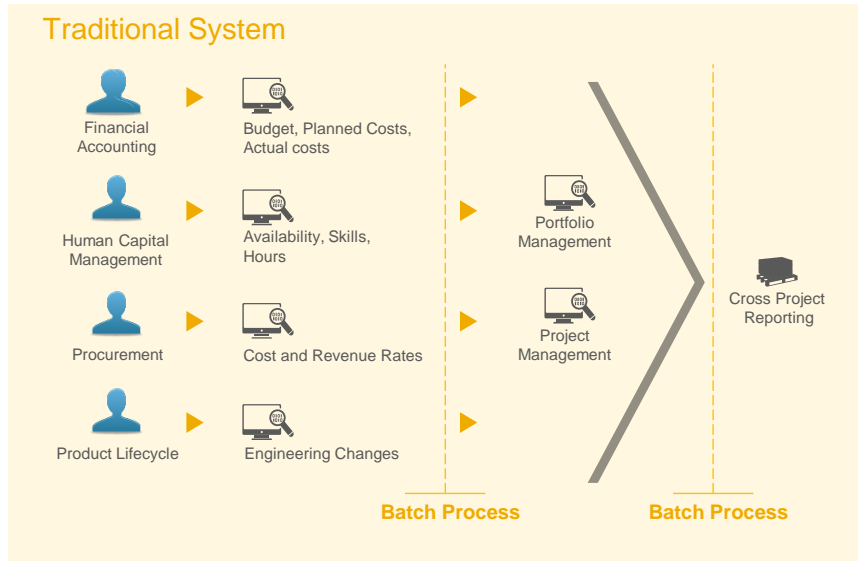

Of companies report a lack of seamless integration between project and resource management systems*

Portfolio Management

Project Management

Resource Management

Research and Development Projects

"optimize capital spent & strategic resources in innovation lifecycle"

IT Projects

"alignment of IT-activities and resources with the business strategy"

Capital Projects

"planning, management and monitoring of investment projects"

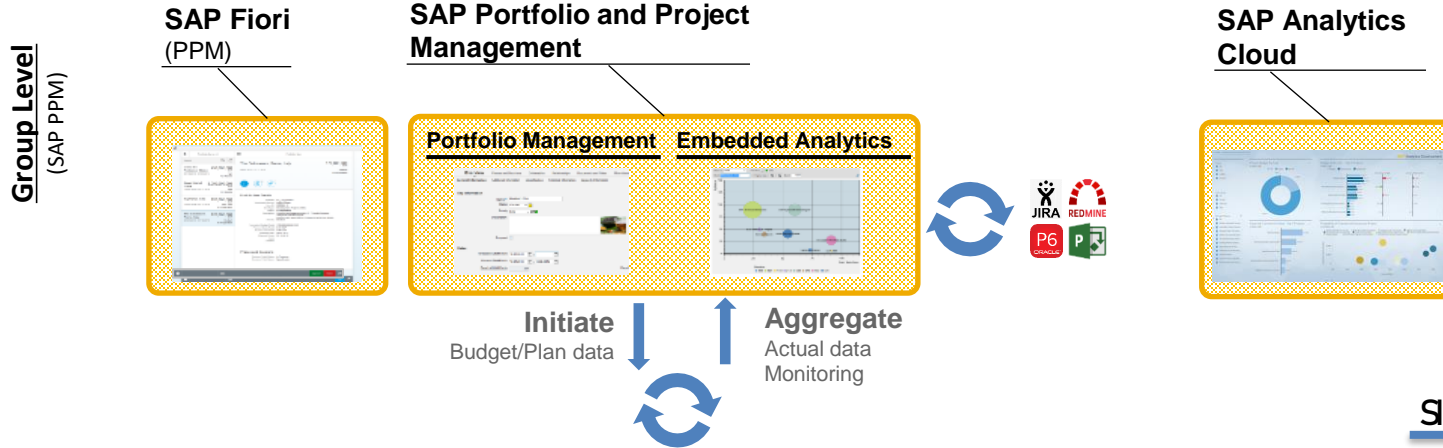

Commercial Projects

"execution of customer projects from opportunity to hand-over"

Strategic Portfolio Management

Company Level
(SAP ECC or S4/HANA)

Operative divisions

Sales & Logistics	R&D	Resources	Financial Data	Project Management
SD/CRM	PLM	HR	Project System	Project Planning
PP/SCM	EHS	MRS	FI/CO	Execution, Monitoring
MM/SRM		Time (CATS)		Progress Tracking

SIMPLIFY YOUR INVESTMENT

- Native integration into other SAP components such as project controlling and procurement
- Part of S4/HANA
- Simple integration with your other operative project management tools such as Jira
- Real-Time Cross Analytics with SAP Analytics Cloud

Enterprise Project and Portfolio Management

Orchestrate, Plan and Execute projects

Portfolio Management

Maximize return on investments

Precise investment planning and closed-loop monitoring

Project Management

Do the right things fast

Manage projects, tasks, and timelines and track progress.

Resource Management

Do more with less

Complete transparency of the availability of critical resources

Do the Right Projects, Do the Projects Right

Functionalities and benefits

Management and Steering Committees

- Reduce the risk of failure and increase capital portfolio effectiveness with effective financial and capacity planning and decision-making support.

Commercial project manager

- Automate control points on business processes, specifically for finance, contracting and procurement, capital expenditure projects, and risk control

Portfolio manager, IT manager, Product owners

- Structure and review your portfolio; manage investment, capital and operation (maintenance) proposals and projects proposals; insight project and cross project data

Financial/Procurement controller

Project manager

- Manage your projects, tasks, and schedule, while identifying critical paths, assigning resources, and tracking progress (milestones, checklists, Gantt charts etc.)

Team members

Resource manager

Mange all resource types: internal staffs, external contributors, machines; Perform optimal staffing for on going project and maintenance activities (resource share)

- Reduction of investment risk
- Increase customer project profit
- Reduce internal project costs
- Reduce late or wrong decision
- Full control of budgets and project costs

- Harmonization (governance) of company wide processes
- Simplification of performance monitoring and reporting
- Full control of budgets and project costs

- Consistent and actual data available for all process participants
- Significant reduction of risk and early recognition of project deviations
- Improvement of project profitability

- Streamlined request process for staffing to ensure adequate resource availability
- efficiency and lower project costs
- Reduction of manual efforts for project accounting and controlling
- Employee satisfaction

About us

Commodo as leading SAP partner for implementation of SAP EPPM using SAP standard solutions: SAP PPM, SAP CPM, SAP PM, SAP Analytics cloud, SAP Cloud platform integration in CEE

Commodo is SAP strategic global partner for integration projects (integration of SAP PS, SAP PM and SAP PPM/CPM with external systems like Microsoft Project, Primavera P6, JIRA, Redmine etc. Using SAP on-premises or Cloud Platform Integration (CPI).

Commodo® ePPM Suite speed up your implementation of integrated (hybrid) Project Management system.

Member in SAP Digital Projects and Product Innovation Partner Community

SAP PS, PPM certified and CPM educated employees

Excellent relationship with SAP development teams

Demo LAB (SAP ERP and S4/HANA for demonstration of your end-to-end scenarios

Functionalities and benefits (1)

Management and Steering Committees

- Invest in the right projects by aligning the project portfolio with the capital planning strategy.
- Monitor your business data and get real time insight in your planning and actual data and forecast your business
- Review your long term multi project resource capacity planning
- Access your business data and get real time insight in your planning and actual data; Predict and forecast your business
- Reduce the risk of failure and increase capital portfolio effectiveness with effective financial and capacity planning and decision-making support.
- Gain insight into the performance of the entire capital project portfolio through real-time analytics.

- 
- Increase ROI
 - Reduction of investment risk
 - Increase customer project profit
 - Reduce internal project costs
 - Reduce late or wrong decision

Portfolio manager, IT manager, Product owners

- Structure your portfolio (program) hierarchy
- Enable portfolio review management
- Submit investment, capital and operation (maintenance) projects proposals
- Simplify your project decision process
- Enable centralized end-to-end financial planning
- Enable multi project resource capacity planning
- Review your portfolio elements (e.g. using scoring and questionnaires)
- Simulate changes in the budget assignment or capacity assignment (What-If Scenarios)

- 
- Harmonization (governance) of company wide processes
 - Simplification of performance monitoring and reporting
 - Full control budget processes and project costs

Functionalities and benefits (3)

Resource manager

- Plane role based capacity for cross projects
- Make long term strategic decisions for employees
- Enable effective development of competences
- Strategic decision about long term asset/machine investments
- Manage your subcontractor needs
- Greater transparency of multiple parallel projects across locations and regions
- Perform optimal support for on going project and maintenance activities (resource share)
- Manage all resource types: internal staffs, external contributors, machines

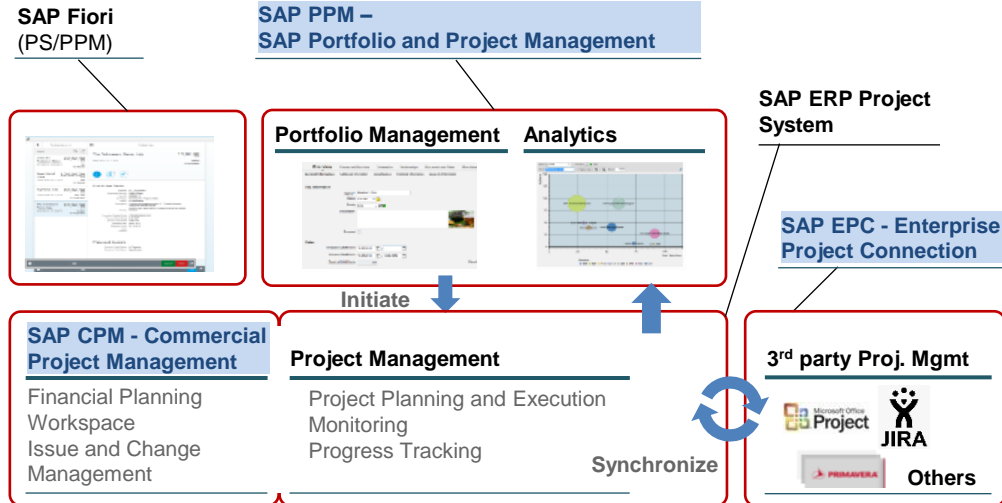

- 
- Significant increase of workforce efficiency
 - Risk reduction (critical resources)
 - Budget optimization (competences)
 - Employee satisfaction
 - Improvement of collaboration with PM

Financial/Procurement controller

- Join end-to-end proces from pre-sales, contacting, project execution and closin
- Provide support for the structuring, scheduling and visualization
- Perform optimal project administration
- Enable better controlling of financial demands
- Simplify project related purchasing and optimize it along the company
- Administrate change management requests

- 
- Reduction of manual efforts for project accounting and controlling
 - Optimisation of procurement and invoicing process
 - Reduced cost through operational improvements

Hybrid EPPM system

Sales & Logistics	R&D	Financial Data	Resources
SD/CRM	PLM	Plant management	HR
PP/SCM	EHS	Project System	MRS
MM/SRM		IM	Time (CATS)
		FI/CO	

Portfolio Management provides a comprehensive and up-to-date view of the entire portfolio of investment/capital and operation projects to present the full extent of project risks and opportunities. It allows you to overcome delays that can occur as information is collected from disparate sources. Portfolio Management gathers diverse data into dashboards which act as a starting point for portfolio analysis.

Portfolio and Project Management integrates information from existing project management, plant maintenance, human resources, and financial systems to provide an overview of the project portfolio and role based capabilities and resource (humans and/or machines) availability, and it provides easy drilldown to details.

Commercial Project Management provides special features that help in the core business process requirements of companies that offer project-based services to their customers. Commercial Project Management covers multiple processes in an end-to-end scenario spanning the selling, planning, executing, monitoring, and controlling of projects.

Companies that sell projects (for example, in the professional services or the engineering, construction, and operations industries) use these solutions to further professionalize their core business processes and expand beyond back office capabilities.

SAP Enterprise Project Connection integrates data between SAP systems (SAP ERP or SAP S/4HANA on-premise and SAP PPM) and third-party Enterprise Project Management systems (Microsoft Project Server and Oracle Primavera P6 EPPM).

End-to-end insight, control and collaboration

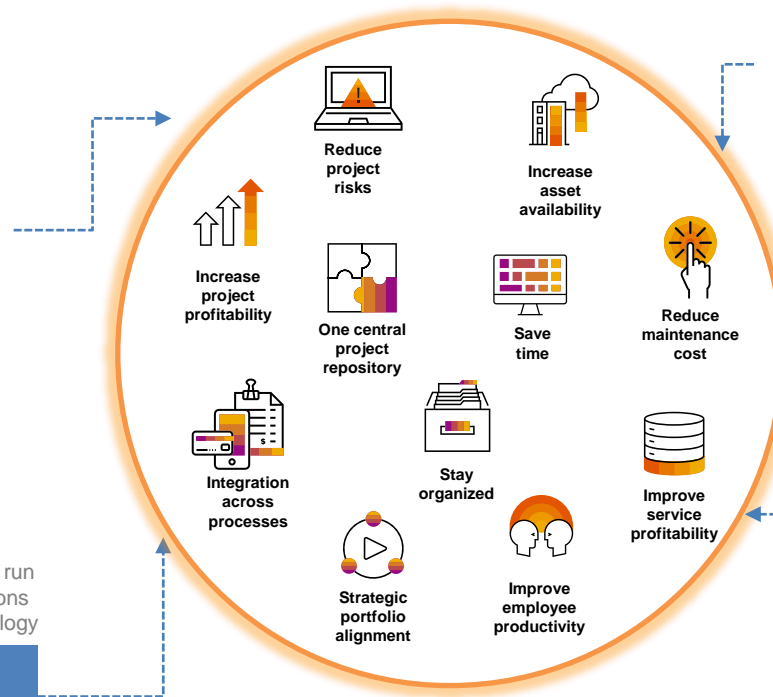

Commercial Project Management (CPM)

- Integrated project Workspace: single and multiple project overview, billing and receivables management overview, procurement overview, optionally integration with CRM etc.
- Project Cost and Revenue Planning: planning scenarios, forecasting (cost, quality, revenue), bid and proposal management, baseline costs and revenue planning, revisions and supplements, forecasting, project monitoring control (sales orders, billing planes, sales pricing, time and expenses, resources etc.), integration with Excel
- Project Issues and Change Management
- Full integration with PPM, SD, PS

Business Analytics

Track organizational KPIs in real-time, run simulations and make business decisions supported by machine learning technology

SAP Analytics Cloud
SAP embedded analytics
Standard PPM/CPM/PS reports

Enterprise Project Connection (EPC)

Integration of SAP PPM, CPM; PS with external project management System like Microsoft Project Server, Oracle P6 Primavera, Jira, Redmine etc.

Resource management (PPM)

- Planning and optimization of human resources (internal and business partners)
- Checking of resource availability across multiple projects and roles based on competences
- Staffing across multiple roles, projects, and resources. As a re
- Integration with PPM, PS, MRS

Project collaboration

- Project management workspace to automate follow-ups and check-ins and provide daily updates on deadlines and critical changes – enabling your team to deliver successful project
- Full integration with PPM
